- Traditional Searching APIs
- Traditional Shopping/Buying APIs
- Traditional Selling APIs
- After Sale APIs
Revamped Developer Portal

AddFixedPriceItem

Use this call to define and list a new fixed-price item. This call returns the Item ID for the new listing, plus an estimate of the fees the seller will incur for posting the listing (not including the Final Value Fee, which cannot be calculated until the listing has ended).

Note: Sellers may be subject to rate limit for Add calls. The Add calls include AddItem, AddFixedPriceItem, AddItemAdjustments, and AddFixedPriceItem.

Users who exceed these call frequency limits for Add calls will be temporarily blocked from listing, and an error message (ErrorCode 211519146) will alert them to this fact. These call frequency limits are subject to change without notice.

A fixed-price listing can include multiple, identical items for sale by setting the Quantity to a value greater than 1.

AddFixedPriceItem is nearly identical to AddItem, with these differences:

- AddFixedPriceItem supports funds that are only applicable to fixed-price listings. It does not support funds that are exclusively applicable to auctions or classified ads listings.
- Most production eBay sites (in the EU, Asia/Pacific, and North America) support this call. The Sandboxes might not support this call for the eBay sites. Please contact Developer Support or check the Site Status if you observe unexpected failures for a particular site.
- The call gives you an option to track inventory by SKU instead of by Item ID. To use this feature, you need to set Item.InventoryTrackingMethod to SKU, and set a value for Item.Sku (even if you previously set these values in AddFixedPriceItem).
- The call supports multiple-variation listings (for example, a particular shirt in varying sizes and colors). See ItemVariations. Call GetCategoryFeatures to determine which categories and sites

inventory_item

The Inventory API is used to create and manage inventory, and then to publish and manage this inventory on an eBay marketplace. There are also methods in this API that will convert eligible, active eBay listings into the Inventory API model.
Testimonials

“The new eBay Developer Program Portal UI is well organized and structured. The font size and colouring are good and comfortable to read. The technical documentation is complete and detailed. The API update announcement is timely, and the guidelines are clear. The most impressive thing is that it supports mobile very well.”

“The revamped developer portal is really excellent. It is so amazingly simple and intuitive that it makes easier to search API documents and latest updates of all API products.”

“The design of the new developer website is very simple and clear. Our team can quickly find the API module document and update. The layout is also very comfortable and easier to read, which saves us a lot of time.”
SDKs and widgets

- Event notification SDK: golang
  https://github.com/eBay/event-notification-golang-sdk

- eBay Translation widget
  https://developer.ebay.com/develop/widgets
New in Buy APIs

**Marketplace expansion**
- Feed v1
- Priority feeds
- Coupons support in feeds

**Compliance**
- Extended Producer Responsibility, FR VAT, VAT on Digital goods, Canada CR

**Initiatives**
- Authenticity Guarantee
- Certified Refurbished
- eBay International Shipping
API Security

- TLS 1.2 across all HTTPS endpoints
- Digicert to Sectigo CA Authority
- Shopping API authorization via OAuth 2.0
